

The Infosec wheel

Infosec is not a separate field, but a process

We already knew **red**- & **blue** teams, but cooperation & integration need to go further!

Red attacks, Blue defends, but who implements the fixes?

Yellow team

The “builders” have to get involved as well!

Theory: **“Yellow Builds it. Red Breaks it. Blue Defends it. Yellow Fixes it.”**

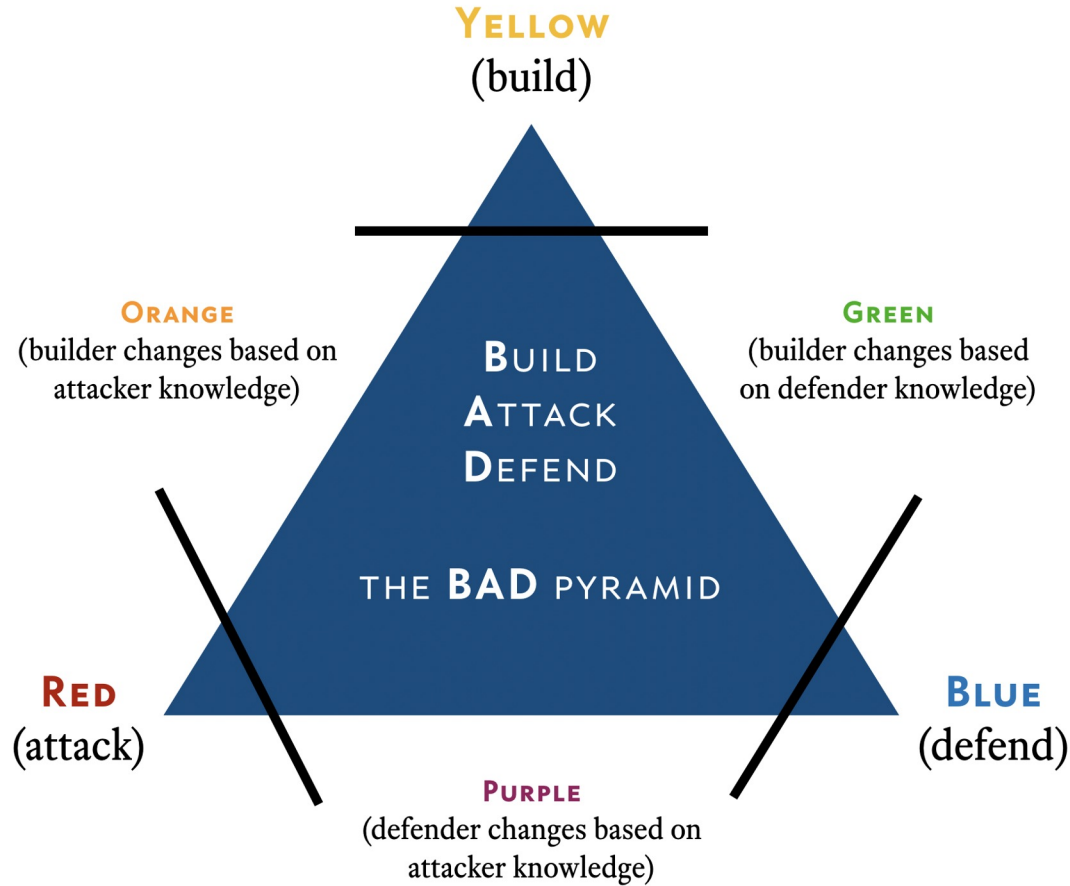

Practice: **“Yellow Builds it. Red Breaks it. Blue Complains about it. Yellow ignores it.”**

Ideal scenario: **“Yellow are educated with Red and work hand-in-hand with Blue.”**

YELLOW TEAM

- Software Builders
- Application Developers
- Software Engineers
- System Architects

New realisations

Even with these 3 teams defined, there were gaps and results not optimal. Only primary colours weren't enough!

Ideal scenario: “**Yellow** are educated with **Red** and work hand-in-hand with **Blue**.” <- remember?

So we need to blend **Red** & **Blue** to form **Purple**!

Enter, The Infosec Wheel!

INFOSEC WHEEL

Relation between Security Cube & Infosec Wheel
