DevOps 2TIN Chapter 2

Agile, DevOps & the 3 ways

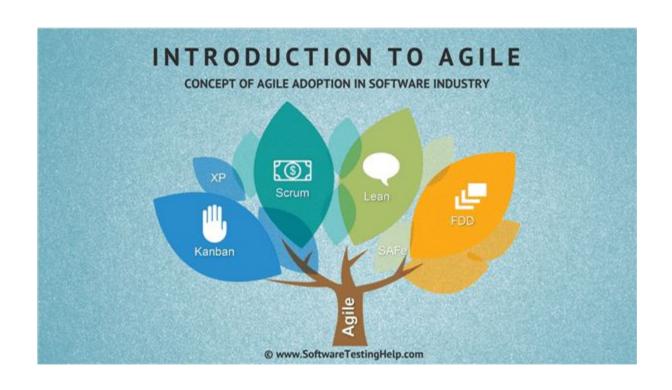

Agile, DevOps & the 3 ways

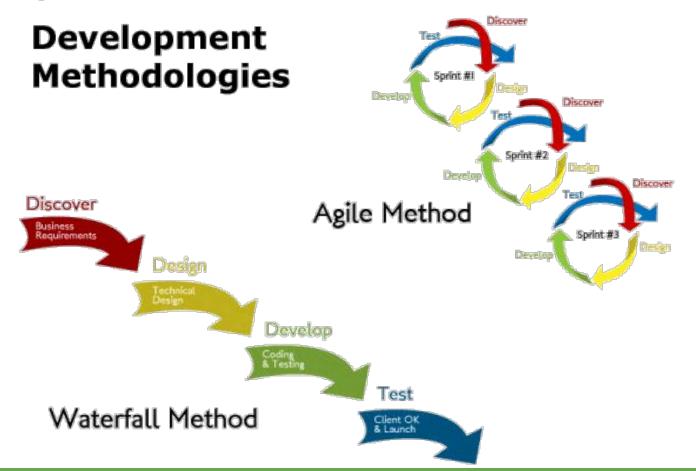

Agile vs DevOps
Historiek
The 3 ways
Reflectie

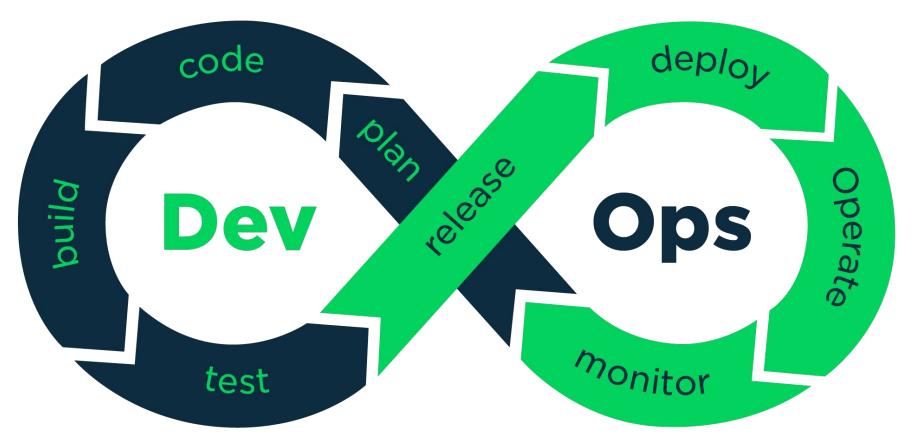

Wat is agile?

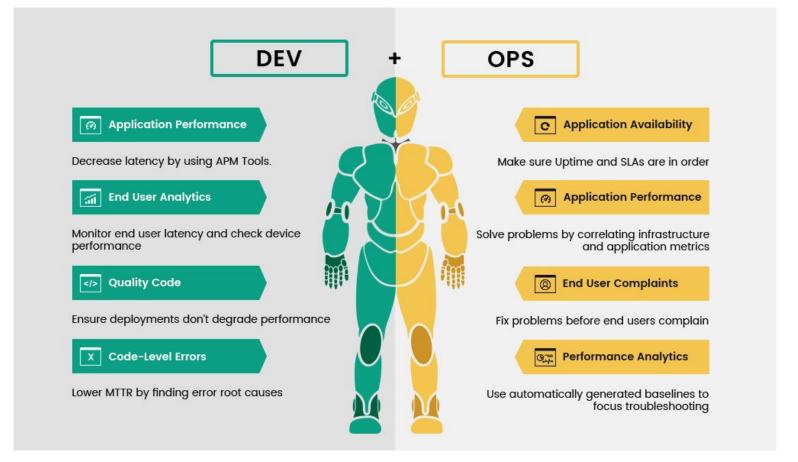

Kleine geschiedenis les

En dan nu DevOps?

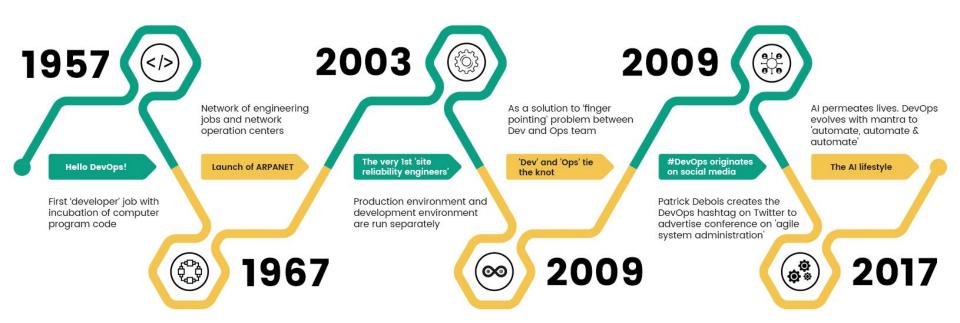

Dus DevOps is een praktische aanpak?

source: https://dzone.com/articles/is-devons-agile

Ohja....DevOps is niet nieuw

source: https://dzone.com/articles/is-devops-agile

Veel dingen doen, maar waarom?

De Filosofie achter DevOps:

The 3 Ways

(of, waarom we al die dingen doen)

The first way

The principles of Flow

- → Waterfall (van boven naar beneden)
- → Agile (van boven naar beneden, in loopjes)
- → DevOps (van links naar rechts naar links, altijd in beweging)

Maar, Hoe?

Hoe verhogen we de "flow"

Kleinere stapjes, maar meer releases betekent:

- Minder WiP
- Makkelijker om fouten te vinden en op te lossen
- Maakt werk zichtbaarder

Source: "Why mass production isn't the most efficient way of doing 'stuff'" by Stefan Luyten

The first way

Identificeer de onderdelen die zorgen dat het business-idee omgezet wordt in een realiteit

Code, Infrastructuur, Data, Testen, Nieuwe features = Flow

(Business)

(Customer)

Dev Ops

En maak er een pipeline van ——— Eén systeem ivp verschillende silos

Wat is een Pipeline?

Definitie "deployment pipeline":

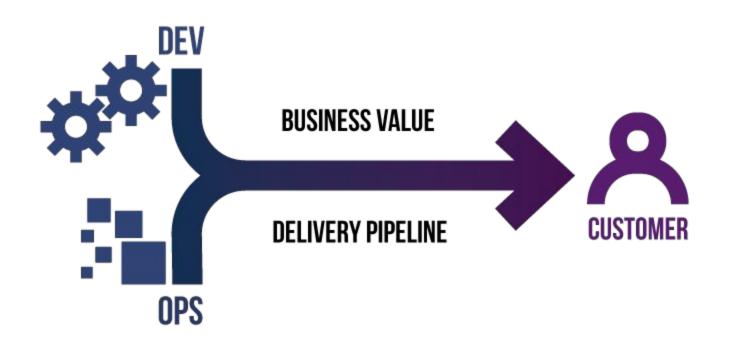

(first defined by Jez Humble and David Farley in their book Continuous Delivery: Reliable Software Releases Through Build, Test, and Deployment Automation)

It ensures that all code checked in to version control is automatically built and tested in a production-like environment.

Sleutelwoorden:

- Alle Code
- Versiebeheer
- Automatisch gebouwd
- Automatisch getest
- Productie-waardige omgeving

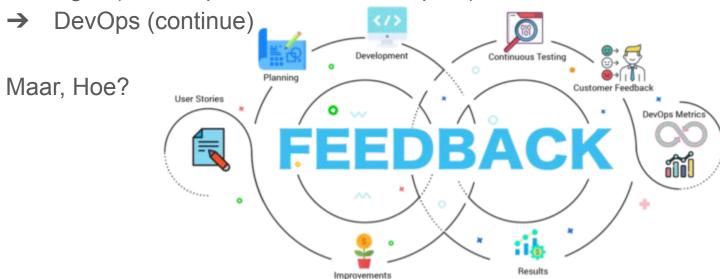

THE FIRST WAY CREATE A DELIVERY SYSTEM

The Second Way

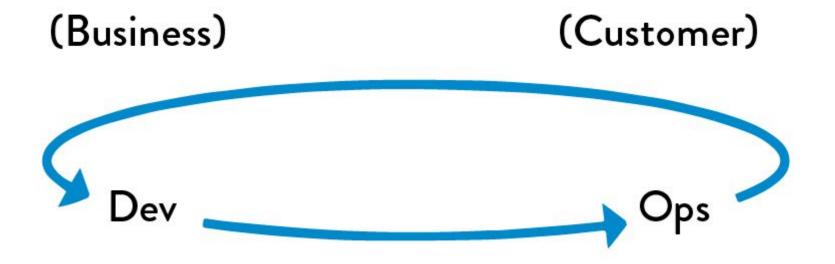

The principles of feedback

- → Waterfall (enkel op het einde)
- → Agile (enkel op het einde van de sprint)

The Second Way

Door continue te monitoren & testen en ervoor te zorgen dat we problemen opmerken als ze gebeuren, ze aan te pakken en op te lossen alvorens verder te gaan

Test **ALLES** vanaf het moment dat het kan!

Ideal vs. Non-Ideal Testing Pyramids

Test **automatisch** om Continous Integration te bekomen

Definitie *continuous integration*:

- A comprehensive and reliable set of automated tests that validate we are in a deployable state.
- A culture that "stops the entire production line" when our validation tests fail. (=digital andon cord)

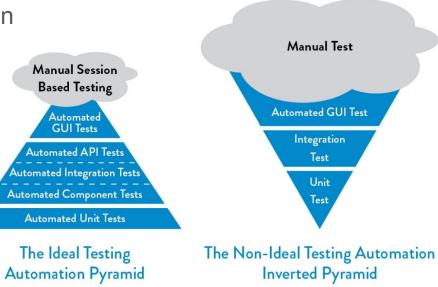

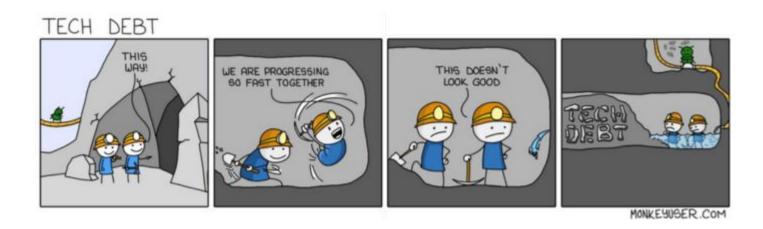

Figure 14: The ideal and non-ideal automated testing pyramids (Source: Martin Fowler, "TestPyramid.")

Stop de pipeline, gooi het probleem in de groep en los het op **Swarming** zorgt ervoor dat dit snel en efficiënt kan

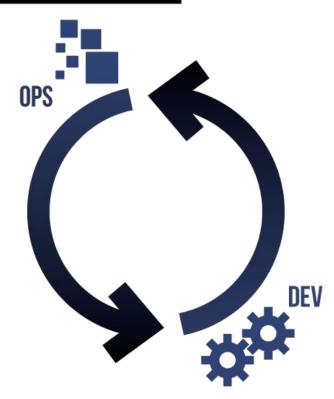

Source: https://medium.com/devops-cloud-it-career/the-three-ways-of-devops-part-2-of-3-8d473f50d99d

Problemen NU oplossen voorkomt issues later! Problemen laten liggen "omdat er nu geen tijd is" zorgt voor **Technical Debt**

THE SECOND WAY AMPLIFY FEEDBACK LOOPS

The Third Way

the creation of a generative, high-trust culture that supports a dynamic, disciplined, and scientific approach to experimentation and risk-taking, facilitating the creation of organizational learning, both from our successes and failures

Enable safety

Improvement of daily work

Local discoveries to global improvements

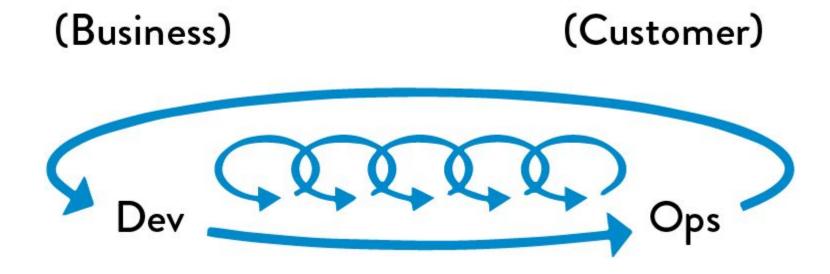

Inject Resilience

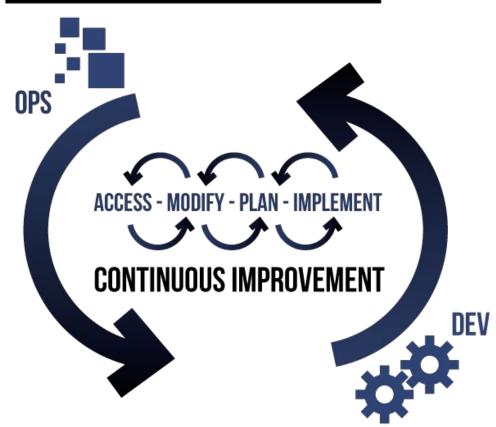

"If you are not failing, you are not innovating enough" (Elon Musk)

The Third Way

Dit is de moeilijkste, en heeft vaak ook te maken met een cultuur shift binnen bedrijven.

THE THIRD WAY LEARN & EXPERIMENT CONTINUOUSLY

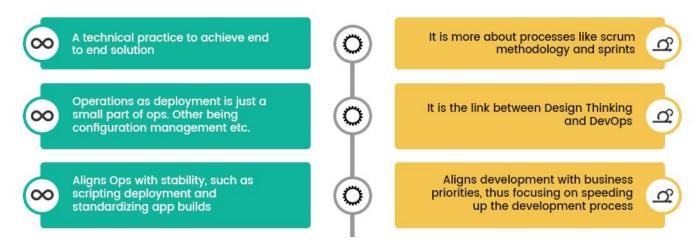

High level overview, hoe we dit in de praktijk gaan doen zien we in de volgende

hoofdstukken vanuit de praktijk.

What's the difference?

Recap - Is DevOps Agile?

In agile, the gap between these teams are bridged in daily scrum calls where all roadblocks are discussed and resolved with agile scrum methodologies.

Aims at streamlined delivery via tools like Kanban Board, Scrum, Extreme Programming (XP), Test Driven Development (TDD), Feature Driven Development (FDD), and Lean. These practices help in project management, planning and collaboration.
